

Group 3 -

We completed our signup page and were in the process of completing our search function for the demo. During the demo, our signup page worked flawlessly. Our search function was not completely developed yet so it did not function during the demo.

During development we faced issues with incorporating a search into our demo. We still need to have the search function search a database.

We asked the TA about suggestions for how our sql database should be set up. She provided guidance and recommended different methods of storing our data.
